# Library **VS** Framework Real Life **ex**

*Art by Zuccarello*

 **Oraask**

in/hassanabdo

**The two terms are used interchangeably.**

**But are they same?**

**Oraask**

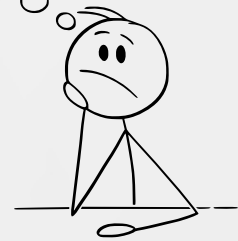

in/hassanabdo

## Library.

I have an  
algorithm to  
do something

But i don't  
want to write it  
multiple times

I will write it in  
reusable function

Congrats. You have  
created a library

**Orask**

in/hassanabdo

## Library.

- With Library, we are proof the DRY (Don't Repeat Yourself) concept in programming.
- Write it once and use it many times.
- Your code calls libraries.

## Framework

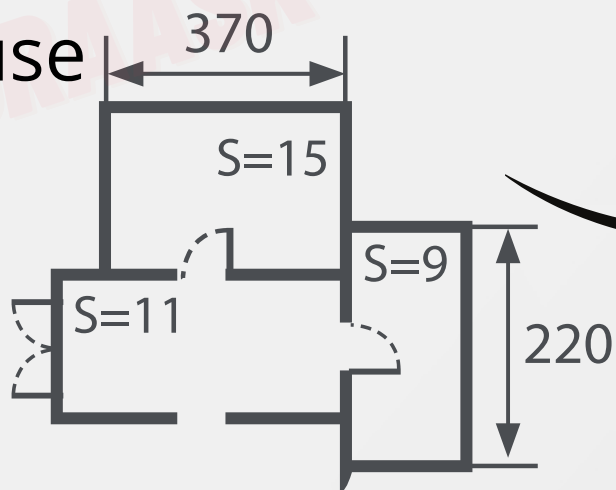

I want to build a house

But how many doors, rooms are in this house

We have to have a blueprint for this house

Congrats. Now the blueprint is the framework here.

# Framework

- Framework is a foundation or skeleton of our application.
- Framework calls your code.
- It might contain libraries.
