

EP. 2

THE FRONTEND INTERVIEW

Which HTML tag can be used to display mathematical variable?

`<var>` tag can be used to display mathematical variable.

Are you familiar with
<datalist> tag?

Yes, I am familiar with
<datalist> tag.

Can you explain how the `<datalist>` tag is used with an example?

`<datalist>` tag is used to provide an auto-complete feature for `<input>` element.

User will see a dropdown list of pre-defined options as they input data...

```
<input list="books" id="book">
```

```
<datalist id="books">
```

```
  <option value="Javascript">
```

```
  <option value="Java">
```

```
  <option value="Python">
```

```
  <option value="React">
```

```
</datalist>
```

What is the use of
<details> tag?

<details> tag is used to create an interactive widget which specifies additional details that the user can open and close on demand. It is used along with <summary> tag.

```
<details>
```

```
  <summary>Shahbaz Khan</summary>
```

```
  <p>Visit
```

```
    <a href="https://www.shahbazkhan.in">
```

```
    Shahbaz Khan's website
```

```
    </a>
```

```
    to know more about him.
```

```
  </p>
```

```
</details>
```
