

# N<sup>th</sup> Child Selectors in CSS

## What is :nth-child() selector in CSS?

The **:nth-child(n)** selector matches every element that is the nth child **of its parent**.

n can be a number, a keyword (odd or even), or a formula (like  $an + b$ ).

swipe and understand better  
with a quick example

Consider the given scenario

```
● ● ●  
<ul>  
  <li></li>  
  <li></li>  
  <li></li>  
  <li></li>  
  <li></li>  
  <li></li>  
</ul>
```

```
li:nth-child(5) {  
    background: blue;  
}
```

```
li:nth-child(even) {  
    background: blue;  
}
```

```
li:nth-child(odd) {  
    background: blue;  
}
```
