Do you know ?

how to use **Map0** with

async await

Definition and Usage

- The map() method creates a new array populated with the results of calling a provided function on every element in the calling array

- map() calls a function once for each element in an array.

syntax:

array.map(function(currentValue, index, arr), thisValue)

Structure

```javascript
const obj = ArrayName.map(async (value) => {
    // your code
    // your code
    // your code
});

const results = await Promise.all(obj);
```
