Laravel Pint

What is Laravel Pint ?

Laravels latest open source CLI app has been released.

From the readme:
"Laravel pint is a zero-dependency PHP code style fixer for minimalists – built on top of PHP-CS-Fixer".

Install it using composer:

```
> composer require laravel/pint --dev
```

Laravel

If you would like Pint to simply inspect your code for style errors without actually changing the files, you may use the --test option:

```
./vendor/bin/pint --test
```

Output:

```
PS D:\Free\pint-app> ./vendor/bin/pint --test
............x.x.........................x..........x..

                                                                        Laravel
  FAIL  ....................................................... 53 files, 4 style issues
  x app\Models\User.php                                              no_unused_imports
  x app\Providers\AuthServiceProvider.php                            no_unused_imports
  x database\seeders\DatabaseSeeder.php                              no_unused_imports
  x tests\Feature\ExampleTest.php                                    no_unused_imports
```

Laravel

Run Pint:

```
./vendor/bin/pint
      // Run Pint with files detials
./vendor/bin/pint -v
```

Output:

```
PS D:\xampp_novatoresols\htdocs\personal\free_course> ./vendor/bin/pint
......\.√./√√√√√../√.........√√√√.√√√√√√../.√......√.......√.√√√√.....
..√./√.
                                                                         Laravel
